

Netflix Stock Analysis Report

This report explains the complete Netflix Stock Analysis project created using Excel, Power BI, Python, MySQL, and CSV datasets. The analysis focuses on Netflix stock market performance from 2018 to 2022.

What is Analysis?

Analysis means examining data carefully to discover patterns, trends, and useful information. In stock market analysis, data is analyzed to understand price movement, trading volume, market trends, and investment performance.

Tools Used in Project

Tool	Purpose
Excel	Dashboard creation and KPI analysis
Power BI	Interactive business intelligence dashboard
Python	Data cleaning and stock trend analysis
MySQL	Database management and SQL queries
CSV File	Raw stock market dataset

Project Analysis

- The average closing price was analyzed using dashboard KPI cards.
- The highest stock price reached approximately 700.99.
- Trading volume analysis identified high market activity periods.
- Monthly return percentage helped measure investment performance.
- Positive vs negative sentiment analysis showed market behavior trends.
- Stock price trend charts visualized price growth and decline patterns.

Excel Dashboard

Power BI Dashboard

Conclusion

This project demonstrates practical skills in business intelligence, data analysis, dashboard development, SQL querying, and Python data processing. The report and dashboards can be used for portfolio presentation, job interviews, and client demonstrations.
